

ServicesDown

module.exports() => (HTML)

This page is displayed, when one of the following services is down:

- Frontend
- Backend
- Database

Kind: Exported function

Code

```
/** @module ServicesDown */

import "./style.css"
import sad_penguin from "../../assets/sad_penguin.jpg"

/**
 * This page is displayed, when one of the following services is down:
 * - Frontend
 * - Backend
 * - Database
 * @function
 * @returns {HTML}
 */
export default function ServicesDown(){
  return(
    <div className="services-down">
      <div className="msg-area">
        <div>
          <h1>Ooops!</h1>
          <h2>Looks like there has been a problem on our end!</h2>
          <h3>Please be patient, while we try to bring our services back
online.</h3>
        </div>
        <img src={sad_penguin} alt="sad penguin sitting down" height="218"
width="218"></img>
      </div>
    </div>
  )
}
```
